SUMMARY

Full-stack software engineer with 8+ years of experience building scalable web and mobile products, specializing in React/TypeScript micro frontend architectures and integrating AI/LLM-backed features into production workflows. Uses AI as a daily pair-programmer for code review, debugging, and delivery velocity.

SKILLS

Frontend	React, React Native, TypeScript, JavaScript, Redux, Redux-Saga, Next.js
Backend	Node.js, Python, REST APIs
Databases	PostgreSQL, MySQL
Cloud & Tools	Azure DevOps, Webpack, Module Federation, Office.js, Amazon Lex, Git/GitHub
AI & LLMs	Claude, ChatGPT, Gemini, AI-Assisted Development

EXPERIENCE

Appfabs Incorporation

4 years total

Software Engineer

June 2026 - Present

Greater Toronto Area, Canada

- Integrated AI/LLM-backed services into the playbook analysis flow, building responsive UI states for streaming results, loading, and error handling.
- Architected and maintained a micro frontend system (Module Federation), enabling independent deployments; improved search performance ~30% and reduced document delivery time ~25%.
- Optimized Webpack configurations, reducing bundle size and improving application performance ~20%.
- Contributed to Compliance Checker UI for automated review, flagging nonconforming clauses against firm and regulatory standards.

Software Developer

December 2025 - June 2026

Kerala, India

- Built responsive, accessible (WCAG-aware) UI components in React/TypeScript for complex legal workflows.
- Engineered the Document MFE rendering module with an integrated Delivery API for secure print, email, and multi-format export.

Software Engineer

September 2022 - December 2025

North York, ON

- Delivered core React/TypeScript UI components and citation validation/legal search features across the litigation product line.
- Established front-end patterns and component structure that supported the later migration to micro frontend architecture.

LTI - Larsen & Toubro Infotech

Software Developer

February 2018 - September 2020

Mumbai

- Built a conversational HR chatbot using Amazon Lex delivered through a React chat widget, reducing manual HR support load.
- Developed a cross-platform attendance application (React web + React Native mobile, Node.js/PostgreSQL backend).
- Built a web portal analytics dashboard and designed/consumed REST APIs across projects; mentored junior developers.
